

Code Structure

The HTML document follows the HTML5 standard with proper head and body sections. The layout is divided into header, navigation, main content, and footer using semantic tags.

Key Sections

The header contains the newspaper title and logo. The main section uses a table to create two columns for articles. Each article is wrapped inside an `<article>` tag for semantic meaning. The footer displays publication information.

Design Decisions

Tables were used to replicate the column layout because external CSS was not allowed. Semantic tags improve readability and structure.

Challenges

Maintaining alignment without CSS was challenging. Inline styles and table widths were used to control the layout.
